

Life Diet BOT Setup Manual (v1)

1. Overview

- Built with Python + Flask + LINE Messaging API + OpenAI API
- Deployed on Vercel
- Uses JSON for lightweight data storage (can migrate to DB later)

2. Prerequisites

You need:

- A GitHub account
- A Vercel account (free plan is OK)
- A LINE Developers account
- An OpenAI API key
- Python 3.10+ for local testing

3. Local Setup (for testing)

1. Clone the repo
2. (Optional) Create virtual environment
3. Install packages: `pip install -r requirements.txt`
4. Create/edit `.env` file using `.env.sample`
5. Start: `python main.py`

4. Vercel Deployment

1. Log in to Vercel, create New Project
2. Link GitHub repo, set framework: Other
3. Set root directory: life-diet-bot
4. Set environment variables (`.env` values)
5. Deploy and get Vercel URL
6. Set webhook URL: `https://your-project.vercel.app/callback`

5. LINE Messaging API Setup

1. Create Provider and Channel (Messaging API)
2. Get `CHANNEL_SECRET` and `CHANNEL_ACCESS_TOKEN`

3. Enable Webhook, input Vercel callback URL

4. Enable reply mode

6. Character Selection

Edit .env: CHARACTER=carona (or treo / pekoru)

7. Future Plans

- Flex Message with images
- Weekly summaries (MVP meal, encouragement)
- LINE sticker integration
- DB storage and analytics
